

YEMEN

25 March 2022

Key Figures:

20.7 million people in need

Over **4.2 million** internally displaced

Up to **1.6 million** displaced Yemenis living across 2,350 hosting sites¹

25,674 individuals (4,279 families) newly displaced in 2022¹

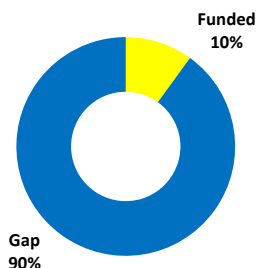

Children and women represent up to **79 per cent** of the total IDP population

82,868 refugees

12,947 asylum-seekers

Funding:

USD **291.3 M** required for 2022 operations

USD **25.4M** received as of 25 March 2022

¹IOM-RDT – 15 March 2022

IDP Response

On Saturday, 12 March, a significant fire erupted in 'Bin Abood' IDP site in Marib City stemming from electrical wiring found to be non-compliant with Shelter Cluster spacing standards. The fire destroyed the shelters and the personal effects of 12 families (82 persons). UNHCR and implementing partner SHS responded within eight hours, conducting needs assessments, assisting with the clean-up of the fire remnants, correcting site planning based on cluster spacing standards, installing tents (from emergency stock), and distributing NFIs to affected families. Families were provided with psychosocial support via UNHCR's protection partner, and cases were referred to partners for further intervention.

As the rainy season is starting in the northern governorates of Yemen, UNHCR and its partners have started preventive measures to contribute to alleviating the potential risks to many IDPs living in IDP hosting sites. UNHCR's protection partners in Ibb, Deem and Yemen Women's Union, in coordination with the Camp Coordination and Camp Management (CCCM) and Shelter/NFI Clusters, started targeting IDP hosting sites within Ibb hub with integrated protection interventions, including needs assessments, emergency cash assistance, referrals to shelter and non-food items (NFIs) services, psychosocial support, legal assistance and children's recreational activities.

During the reporting period, UNHCR's partner in Amran Yemen Red Crescent (YRC) completed a medical centre extension project in Harf Sufyan district in Amran governorate through the CCCM care and maintenance project. The Director of the Health Office of Harf Sufyan district, authorities' representative, and YRC's CCCM staff attended the opening of the medical centre extension. The medical centre serves as the closest medical care-providing facility to IDP and host communities from eight nearby sites, reducing the need for people in need to travel long distances. The medical centre will soon also be provided with medical devices related to children's and women's health.

YRC Amran completed a social empowerment activity for women and girls on poultry breeding. Chicken coops were distributed this week for all 14 participants, while chickens will be distributed the next week. Moreover, participants of the midwifery learning programme under UNHCR's quick impact projects (QIP) completed theoretical and practical parts of the six-month intensive course. Six women were certified by Amran Health Institute with a nurse-midwife certification, licensed to deliver babies and advise women throughout their pregnancies. In the coming weeks, YRC-Amran will start the implementation of another QIP for IDP and host community members living with disabilities.

Refugee Response

UNHCR facilitated a four-day training for its protection partners INTERSOS and Field Medical Foundation between 13 and 16 March. The training agenda was designed in close consultation with the two partners to document the actual training needs of their frontline staff, persons with specific needs (PwSN) criteria, gender-based violence pocket guidelines, access to justice, psychosocial first aid for children, and concerns and challenges on the ground. It aimed to enhance partners' understanding of gender-based violence, child protection, and PwSN prevention/ risk mitigation/ response where there is a lack of relevant services on the ground.

UNHCR and legal partner provided legal assistance to 47 refugees and asylum-seekers identified through the UNHCR reception and drop-in centres in Basateen, Mukalla, and Kharaz camp. The legal assistance included legal representation in non-criminal cases, documentation, child custody, alimony, marital and divorce issues, and legal representation in detention facilities and police stations. Moreover, **eight legal awareness sessions were conducted** in INTERSOS offices and other locations, mainly on family and criminal law topics.

During the reporting period, some 1,131 refugees, asylum-seekers, and Yemeni nationals consulted at the UNHCR-supported clinics in Basateen (659) and Kharaz (652). Febrile illnesses and upper respiratory tract infections continued to be the leading cause of out-patient consultation, with 295 cases reported from both Kharaz and Basateen. **Moreover, nine suspected COVID-19 cases were treated, one of which was confirmed positive.** Another 1,484 (792 refugees and 692 Yemenis) consulted UNHCR-supported clinics in Sana'a governorate, including 222 refugees and asylum-seekers with chronic conditions who received non-communicable diseases case management consultation and medication. Some 655 refugees received community outreach awareness sessions on nutrition, infant and young child feeding practices, breastfeeding, vaccination, hygiene, causes and prevention of water-borne diseases, prevention and control measures of infectious diseases, such as COVID-19, cholera, diphtheria, and H1N1. In addition, 227 brochures with health awareness messages were distributed in Arabic and other languages.
