Strategic Updates

Service Mapping and Referral Tracking Tools

The National Protection Cluster has launched the third updated version of the National Protection and AoR Service Mapping (October 2024 Update), a collaborative tool designed to improve coordination and service delivery for protection services. This tool provides an overview of services in General Protection, Child Protection, Women Protection, and Mine Action. It allows users to filter services by location, type, and organization. It also features a geographical map for easy navigation. The updated system enhances referral mechanisms at national and sub-national levels, helping partners identify service gaps and ensuring vulnerable populations receive timely interventions. Additionally, a new referral tracking mechanism monitors the progress of referrals, ensuring no one is overlooked. This tool aims to strengthen coordination, improve access to services, and fill gaps in protection services for vulnerable groups. The new Service Mapping enables partners to update their services on a regular basis, ensuring efficiency in referrals and access to services.

Centrality of Protection Strategy & Action Plan:

Throughout 2024, the Protection Cluster supported several clusters in the implementation of their commitments to Centrality of Protection action plan through specific focused priorities.

Below are cluster-specific priorities for advancing protection in the response that the PC supported:

1. **MPCA and Protection:** Strengthen targeting, referral, and coverage through updated Cash for Protection and Vulnerability Guidance Notes (details of the collaborative efforts between Cash for Protection and MPCA are covered as a standalone strategic update later in this Newsletter).
2. **WaSH and Protection:** Integrate protection into WASH programming with conflict-sensitive approaches, safety audits, and updated protection mainstreaming tipsheets. In the furtherance of CoP, the WaSH Cluster undertook certain actions including formation of a protection mainstreaming task force within WaSH cluster, review of safety audits, working with the PC to review protection tipsheets, convening protection mainstreaming training for WaSH partners in collaboration with the PC among others.
3. **CCCM:** Address civil documentation gaps, site risk mapping, inclusion monitoring, and strengthen complaints mechanisms. CCCM and PC are already working together to monitor evictions in sites as well as mapping IDPS without civil documentation in the sites, and implications of lack of documentation on the IDPs, among other actions.
4. **Shelter and Protection:** Address CP and GBV risks in shelter/NFI distributions, advocate against forced evictions, and build capacity on inclusive programming. Some of the actions implemented by Shelter Cluster towards the realization of centrality of protection in 2024 include enhanced monitoring of risks in the distribution of shelter and NFIs, collaboration with the PC to develop a training package for protection mainstreaming in the Shelter cluster, review of protection mainstreaming tipsheets in coordination with PC.

Advancing the Centrality of Protection: Collaborative Training on Protection Mainstreaming for Humanitarian Clusters

The Protection Cluster has worked with Shelter, CCCM and WaSH clusters to deliver a round of training on protection mainstreaming in line with clusters' commitments to the Centrality of Protection Strategy. The training package includes sections on protection mainstreaming in the programme cycle with practical examples on each of the four principles. The PC is also working with clusters to train partners on protection risk analysis and mitigation to support systematic monitoring and reporting of clusters' protection

mainstreaming efforts. Each cluster has adopted and committed to ensure reporting on an indicator on protection risk analysis and mitigation as part of HNRP 2025. This is also embedded in clusters' workplans for 2025.

Situational Analysis, 2024

The PC launched a situational analysis featuring 11 protection risks that continue to drive people's needs in Yemen in 2024. This launch marks a significant step in addressing protection needs across Yemen. Here's a breakdown of its key elements:

- **Comprehensive Overview:** The situational analysis offers a detailed examination of 11 protection risks, focusing on both district and governorate levels.
- **Data Sources:** The analysis utilizes protection monitoring data from the NPC (National Protection Cluster) and other clusters. By integrating data from various sources, the analysis ensures a more holistic view of the protection landscape.
- **Identification of Affected Areas:** By pinpointing the most affected districts and evaluating the severity of protection risks, the analysis helps in prioritizing areas where interventions are most needed.
- **Informed Interventions:** The insights from the situational analysis are crucial for designing targeted protection interventions. These interventions are intended to be evidence-based and responsive to the specific needs identified in the analysis.
- **Integrated and Multisectoral Approaches:** The analysis supports the Centrality of Protection Strategy for Yemen by promoting approaches that integrate protection considerations across different sectors. This aligns with broader goals of ensuring that protection needs are central to all humanitarian responses and strategies.

In essence, this situational analysis serves as a foundational tool for refining and enhancing protection strategies, ensuring that interventions are both effective and aligned with the overarching protection goals for Yemen. Click on the [Link](#) to access the Situational Analysis 2024.

Multi-purpose cash assistance (MPCA) and Cash for Protection (CfP):

In 2024, the collaboration between NPC and the Cash Consortium for Yemen, particularly in training protection actors and initiating a pilot project in **(Abyan, Taizz, Al Dhale'e, Al Hudaydah, Lahj)**, indicates a strong push towards integrating cash assistance into protection strategies. The NPC, working with the Cash Consortium for Yemen, conducted a training session aligned with the updated Guidance on Cash for Protection. This training is crucial for ensuring that all protection actors are up-to-date with the latest practices and standards for integrating cash assistance into protection efforts. Furthermore, a pilot project will start, leveraging the data layering exercise done with the Cash Consortium. This project aims to test and refine the integration of cash assistance within protection frameworks. The goal is to enhance the effectiveness of aid delivery by combining cash-based interventions with protection measures. The pilot enables protection actors to refer cases deemed to be having socio-economic vulnerabilities to multi-purpose cash assistance actors for their assessment and assistance, in line with their targeting criteria.

Resources and Publications

HLP WG Activation & Package Launch

The Housing, Land, and Property Working Group (HLP WG) is playing a critical role in addressing the complex HLP issues in Yemen. Under the co-leadership of UNHCR, NRC and UN-HABITAT, HLP WG is working to address HLP issues for IDPs, returnees and host communities. Its goal is to advocate for and address HLP concerns, ensuring a harmonized response across Yemen. The focus on capacity building, harmonization, and funding will be key to achieving 2024 goals.

The WG will lead training on national HLP regulations, the HLP Package that has recently been launched, and provide mentorship and coaching for partners using relevant tools and templates.

Priorities for 2024

Harmonize the HLP Training Package:

Develop and standardize training materials to ensure consistent understanding and application of HLP practices.

Standardize HLP Responses Across Yemen:

Implement uniform HLP response mechanisms to provide equitable and effective support throughout the country.

Secure Funding:

Obtain adequate financial resources to support HLP priorities and ensure the sustainability of interventions.

Guidance Note on Harmonizing Civil Documentation in Yemen

The Legal Aid Technical Working Group (LATWG) continues to work with protection partners as well as the Civil Registration Authority (CRA) towards ensuring timely issuance of civil documentation and/or identifying alternatives, serving as a crucial enabler for accessing a wide range of services nationwide as well as humanitarian assistance. In areas governed by the IRG (Internationally Recognized Government), electronic or smart IDs are commonly used.

The LATWG has finalized the development of a guidance aimed at harmonizing civil documentation practices across different agencies and partner organizations in the country. This initiative aims to streamline processes and ensure consistency in documentation practices which in turn will facilitate timely access to humanitarian services without any discrimination. The guidance contains key recommendations for different stakeholders within the response including humanitarian partners as well as leadership, donors, the CRA, etcetera on the nature of support and actions they need to extend in fostering predictability and efficiency in civil documentation practices.

Community-based Protection Initiatives

The NPC is in its final stages of issuing a guide on Community-based protection initiatives for partners providing these interventions. The issuance of this guide is in line with the need for the protection response to enhance community-based approaches by expanding its emergency and mobile teams, building on previous years' efforts to improve and broaden services in both coverage and quality. The focus is to increase meaningful access to protection services and support. The document offers an overview of community-based protection (CBP) and its role in assisting IDPs and host communities in Yemen, as carried out by Protection Cluster partners.

Engagement with Partners

Key Updates on YHF Standard Allocation, 2024

The YHF standard allocation was launched in October 2024, totaling \$30 million. A prioritization process was used to target the most urgent needs across 32 severely affected districts, each with an inter-sectoral severity score of 4 or higher. The funds will support interventions in 9 governorates, managed through 7 coordination hubs, each with a designated budget prioritized across various sectors. The aim is to maximize impact by converging interventions in these areas. As expected, the allocation prioritized national NGOs as a measure towards fostering localization efforts. The prioritization of districts as well as cluster activities was done at the Hub level ensuring interventions align with local needs, a significant departure from previous approaches. Protection partners submitted 32 projects for consideration – both standalone protection projects as well as integrated projects, a significant majority coming from national partners. 16 of these have been vetted and recommended for funding. The PC is working with other clusters to ensure that all successful projects across sectors are incorporating protection mainstreaming and safeguards in their implementation. As usual, the PC will ensure ongoing engagement with protection partners in support of the implementation of the 16 successful projects. Equally, the PC is engaging the donor community to advocate for enhanced protection funding particularly aimed at supporting projects that due to limited resources, were screened out in this allocation.

HNRP Exercise

1. The Protection Cluster and AoRs worked in consultation with the partners in the ongoing HNRP process, specifically in defining protection priorities as well as determining the people in need of protection services based on available data, agreeing on cluster target and activities to prioritize, including their costs, as part of the protection response in 2025. From the HNRP exercise, the protection PiN at nearly 17 million, representing a 5 % increase compared to last year. This rise is attributed to among other things, increase in the IDP population, civilian casualties remaining high just as in the previous year, improved access and identification of individuals requiring documentation and addressing HLP needs, a rise in eviction threats, increased need for GBV services, unaddressed mental health and psychosocial support (MHPSS) needs and a growing number of out of school children and other violations of children's rights.

Updates on CERF Allocation, 2024

The Central Emergency Response Fund (CERF) has contributed \$20 million to supplement the YHF allocation, bringing the total funding under the two allocations to \$50 million. This combined amount will address the urgent needs in the 32 most severely affected districts, where the inter-sectoral severity score is 4 or higher.

Aligned with the HC Vision Paper 2024, the allocation was determined through a bottom-up consultation process to amplify local voices in decision-making. This approach aims to ensure a more inclusive, participatory, context-specific, and operationally grounded response. Additionally, the funding will prioritize a locally led response and seek to collaborate with a broader network of partners with strong local capacity across Yemen, ensuring that at least half of the funds are directed to local and national NGOs whenever feasible.

Protection-lead agencies (UNHCR and UNFPA) will aim to ensure protection interventions are prioritized within the CERF allocation.

NPC Coordination Meetings

After several months of negotiations with the authorities in Sana'a on the hosting of meetings, the Protection Cluster eventually got the greenlight to resume national cluster meetings in June 2024. While the meetings are still only happening online, this resumption provides the larger protection community in Yemen with the much-needed opportunity to reconvene and discuss issues affecting their interventions. Subsequent meetings have been held in September, October and November at the national level.

Re-activation and Workplan of MHPSS TWG

The MHPSS TWG was reactivated in May 2024 in IRG controlled areas. The MHPSS TWG has been led by a dedicated coordinator on a 3-month deployment which ended in September 2024. The Working Group is co-chaired by the Health Cluster, Protection Cluster, and Education Cluster. The main objectives of the WG are to share national and global resources, tools, and guidelines among MHPSS TWG members, upload the activities of the MHPSS TWG, and encourage organizations to share information on national guidelines, assessments, and validated and adapted tools. MHPSS TWG developed a work plan based on priority areas and the MHPSS Coordination Handbook, providing its members with a strategic framework and reference guide for 2024 and 2025.

Membership, Service Mapping, Coordination MHPSS TWG has developed a comprehensive database of 163 members, including contact details, agencies, primary MHPSS activities, and their membership type. The list also tracks whether each member has completed the service mapping, has access to the resource center, and is actively engaged in the TWG activities. MHPSS TWG has been convening monthly coordination meetings with partners where updates, gaps, recommendations have been discussed. MHPSS TWG has maintained regular monthly meetings for the WG members, serving as a platform to discuss key actions, deliver capacity-building sessions, and provide updates on the TWG's activities as well as partner initiatives. MHPSS has conducted a comprehensive multi-sectoral service mapping, successfully engaging 40 organizations in the process. This was a crucial step in understanding who is doing what and where, ensuring more effective collaboration and resource allocation.

Guidelines, Capacity Building and Trainings: MHPSS has organized and facilitated two multi-sectoral workshops on "Strengthening MHPSS in Humanitarian Programming using the MHPSS Minimum Service Package tool", with the participation of 60 attendees. These workshops were successfully conducted in collaboration with the Health Cluster. In addition, an induction session was delivered to members on IASC MHPSS Minimum Service Package. The package offers an easy-to-follow guide to the highest priority MHPSS activities needed during a humanitarian crisis and response planning to address MHPSS needs of affected populations. MHPSS TWG has provided bilateral support to 15 partners in implementing MHPSS activities, ensuring alignment with both international guidelines and national strategies. The WG has established the MHPSS TWG Resource Centre, an online SharePoint platform that can be accessed by the members. The Resource Centre includes: MHPSS TWG Resources and activities (presentations, meeting minutes, reports, forms), global and national Resources.

Donor Briefing Sessions

In September 2024, the Protection Cluster and AoRs convened a donors' briefing session to update the donor group on the changing operating environment and its implication on protection interventions. The session focused on discussing the security situation as well as the banking/liquidity crisis experienced in the country during the sections of the second and third quarters of the year. The PC and AoRs called on the donor group to ensure continued and consistent funding allocation for protection partners amidst the deteriorating protection environment. The donor group provided an assurance of continued support including through high-level advocacy with the humanitarian leadership on the need to consistently prioritize protection in the response, in keeping with the commitments to Centrality of Protection.

On the donors' request, the PC and AoRs subsequently convened deep dive sessions focusing on GBV, HLP and Civil Documentation. The deep-dive sessions zoomed in on key issues and challenges as well as opportunities for GBV, HLP and Civil Documentation. Each of the deep-dive sessions resolved on specific recommendations that the PC and AoRs and implementing in coordination with the donor group.

CCPM Survey & Workshop

Following protection partners' participation in the cluster coordination performance monitoring (CCPM) survey earlier in the year, PC convened two workshops for IRG and AA-controlled areas in May and June respectively. The workshops presented partners with the opportunity to articulate their views on the cluster's performance against the 6+1 core cluster functions, and recommend corrective measures in areas they considered weak. Generally, all the 6+1 functions were scored as moderately strong. Some recommendations from partners included the need for annual surveys to identify training needs for protection actors, more regular monitoring missions for both standalone protection projects and multi-sectoral missions for integrated projects among other raft of recommendations. These recommendations were consolidated and incorporated in the PC workplan as well as shared with the Global Protection Cluster for their support in implementation.

Engagement with the Authorities

The PC has maintained consistent coordination and liaison with the Supreme Council for the Management & Coordination of Humanitarian Affairs (SCMCHA) during the year 2024, alongside the coordination the various AoRs are doing with relevant line ministries in both IRG and AA-controlled areas. In July 2024, the PC and AoRs held a mid-year coordination meeting with SCMCHA to update the authorities on the cluster's achievements and to urge consistent facilitation of partners through timely clearance of projects and liaison with SCMCHA field offices to ensure smooth implementation of protection projects. SCMCHA called on the Cluster to ensure partners are closely coordinating with them in the clearance of protection activities.

The PC and AoRs also coordinated with SCMCHA on the flood response by protection partners in different parts of the country affected by floods, especially Al Hudaydah.

National Protection Cluster Missions

A mission was carried out in Taiz and Aden to engage with partners on key humanitarian challenges, coordination efforts, and protection gaps. The mission included meetings with stakeholders to discuss referral systems, service mapping, protection mechanisms, civil documentation, Housing, Land, and Property (HLP) issues, and coordination with both partners and local authorities.

The mission also involved visits to IDP hosting sites, some of which were found to be in dire condition with lack of WASH facilities and inadequate shelters being highlighted as key concerns. Lack of livelihood opportunities, unresolved land tenure issues, infrastructure damage, security concerns, and the absence of civil documentation were highlighted as key barriers to return to places of origin – indicating the need to strengthen collaboration with Durable Solutions Working Group towards safe and sustainable returns.

Inclusion Task Force (ITF) in Yemen: A Commitment to Disability and Inclusion

Launched in March 2019 under the guidance of the Humanitarian Coordinator, the Inclusion Task Force (ITF) is a joint initiative of the Protection Cluster and Handicap International. The ITF has been pivotal in advancing disability and inclusion within humanitarian actions in Yemen. It envisions a society where everyone, especially persons with disabilities, older persons, and Al-Muhamshen, have equal opportunities and access to basic services amidst the ongoing humanitarian crisis.

Key Activities and Achievements:

- Webinar on Age and Disability: Ahead of the Humanitarian Needs Overview and Planning Cycle (HNPC), the ITF conducted a webinar focusing on integrating age and disability considerations into the Humanitarian Programme Cycle (HPC). This event addressed challenges, provided practical guidance, and shared best practices to ensure inclusivity.
- Training on Disability in Humanitarian Action: The ITF organized a two-day in-person training attended by 25 participants from UN, national, and international NGOs. This training equipped participants with essential knowledge on disability and its integration into the humanitarian program cycle.
- Monthly Meetings: Regular monthly meetings with partners provide technical and thematic updates on disability, older persons, Al-Muhamshen, data collection, and information sharing. These meetings facilitate knowledge exchange and keep partners informed about ongoing initiatives.
- Shelter Cluster Webinar: The ITF facilitated a session for shelter partners, focusing on the barriers persons with disabilities face in accessing shelter services. The session emphasized the importance of implementing the IASC Must Do Actions (MDAs) to ensure inclusion, highlighting meaningful participation, barrier removal, and data **collection and disaggregation**.
- Revised Protection Mainstreaming Tip Sheets: The ITF has revised the protection mainstreaming tip sheets to thoroughly integrate disability and inclusion considerations. This revision aims to provide clear guidance on incorporating these critical aspects into humanitarian efforts.

Looking Ahead to 2025 : The ITF is committed to enhancing disability inclusion in Yemen by improving service coordination, mapping referral processes for specialized services, and supporting disability institutions and OPDs. Collaboration with clusters and key partners will focus on ensuring accessible and inclusive humanitarian actions.

HRP Activity Guide Training Sessions

The Protection Cluster conducted series of training on the 2024 HRP Activity Guide for Protection Partners. The primary goal of these sessions was to familiarize protection partners with the updated protection activities outlined in the 2024 Humanitarian Response Plan (HRP). The sessions also aimed to provide partners with a clear understanding of new activities, objectives, and priorities in the 2024 HRP, ensuring they are well-equipped to implement and coordinate protection interventions effectively. The sessions also focused on enhancing the capacity of protection partners to deliver targeted, needs-based protection services in line with the updated response framework for the upcoming year.

Flood Response

The PC has finalized a flood response report, outlining protection partners' interventions in response to the flooding incidents that affected many parts of the country in the course of the year. The report offers a comprehensive overview of the flood response efforts coordinated by the National Protection Cluster and its partners in various hubs across Yemen. The response focused on three main areas: preparedness, mitigation, and the protection of vulnerable groups both during and after the floods. Partners collaborated to ensure a unified approach across the hubs, addressing immediate needs while also planning for long-term solutions. Special emphasis was placed on the inclusion of vulnerable groups—such as persons with disabilities, women, children, minorities, and the elderly—whose vulnerabilities were exacerbated by the flooding.

AoR Updates

GBV

The Yemen GBV Area of Responsibility (AoR) has implemented various initiatives to address gender-based violence. Under service delivery, it finalized GBV Standard Operating Procedures (SOPs), updated referral pathways, trained case managers in Aden, distributed dignity kits, and conducted over 25 coordination meetings. In planning and strategy, the AoR collaborated with UNDP to standardize GBV terminology in the north and partnered with ACAPS to research technology-facilitated GBV. A study with the Yemen Women Union focused on the safety and protection needs of marginalized women and girls in the Muhamasheen community to inform tailored interventions. Preparedness efforts undertaken by the AoR included training on referral pathways, capacity-building for stakeholders, and piloting a GBV co-lead in Marib. Monitoring activities tracked partner submissions and funding, while advocacy efforts included developing a strategy and drafting a "Cost of Inaction" policy brief to engage donors. These initiatives aim to improve GBV service delivery, inform strategic decisions, and advocate for vulnerable groups in Yemen.

Child Protection

The Child Protection Area of Responsibility (CP AoR) has undertaken a comprehensive capacity-building initiative as part of its localization strategy to strengthen child protection efforts in Yemen. Key highlights include:

- **Capacity Building Across Hubs:**

After successfully implementing institutional capacity strengthening in the Aden hub, the initiative will expand to all hubs, enhancing the reach and impact of child protection programs.

- **Local Partner Empowerment:**

In 2024, CP AoR, supported by War Child and the global CP AoR, prioritized building the technical and operational capacities of local partners. The goal is to empower local actors to lead and sustain child protection programs within their communities.

- **Enhanced Case Management:**

- Training in 2024 equipped 48 personnel (33 females, 15 males) with case management skills.
- Two Yemeni practitioners participated in international Training of Trainers (ToT) in Thailand to cascade knowledge on engaging community volunteers.
- Plans for 2025 include revitalizing the Case Management Technical Working Group.

- **Child Safeguarding Training:**

Specialized training for 20 CP AoR members (6 females, 14 males) improved understanding of safeguarding principles, fostering accountability and protection.

- **Future Vision:**

CP AoR aims to ensure a skilled workforce, strong local capacities, and adherence to good practices, addressing challenges faced by vulnerable children. Support from global and local stakeholders will be critical in achieving these goals in 2025.

Mine Action

In the first half of 2024, the Norwegian People's Aid (NPA) collaborated with the Protection Cluster, national authorities, and mine action centers in Yemen (YMACC and YEMAC) to address explosive hazards and enhance community safety in the South's (IRG) areas. Adhering to national and international standards, NPA implemented initiatives such as technical surveys, clearance operations, and training programs, reducing risks from explosive remnants of war (ERW).

Key achievements include:

- Integration of Conflict Preparedness and Protection (CPP) and Explosive Ordnance Risk Education (EORE) teams in Taiz, Aden, and Abyan, ensuring comprehensive community education.
- Deployment of Non-technical Surveys (NTS), EORE teams, YEMAC multi-tasking teams, and Mine Detection Dogs (MDD).
- Strategic efforts to improve mine clearance and address challenges hindering safe land use for development.

As of June 27, 2024, NPA conducted 234 EORE sessions, educating 5,532 individuals, cleared nearly 390,000 m² of land, surveyed over 41,000 m², and documented over 2.1 million m² of hazardous areas. They detected 311 explosive items, demonstrating a significant contribution to safety and security in Yemen. The program aims to amplify its impact through partnerships and consortium projects.

Hub Updates

Aden Hub

Despite a relatively calm situation near the frontlines, displacement and natural disasters significantly impacted communities in the first half of 2024. The DTM report indicates a notable increase in internally displaced persons (IDPs), with the majority in Marib, followed by Taiz, Al Hudaydah, Ad Dhaleá, and Lahj. Heavy rains and floods in April, caused by a low-pressure system, affected thousands of displaced households in eastern and central governorates, including Al Jawf, Hadramout, Abyan, Al Mahrah, Ad Dhaleá, and Shabwa.

Challenges such as security issues, funding limitations, and natural disasters posed significant obstacles for the Aden Sub-National Protection Cluster (PC) team. Despite this, they provided protection services to over 107,000 individuals across eight governorates, addressing needs arising from fires and climate-related incidents. Including efforts in Marib and the West Coast sub-hubs, partners reached over 210,000 individuals across ten governorates, delivering psychosocial support, legal aid, cash assistance, community-based networks, and referrals.

Ibb Hub

In Ibb hub, protection partners, including YWU, Deem, INTERSOS, and AOBWC, provided essential services to vulnerable individuals across multiple districts in Ibb, Al-Dhalea, and Taiz during the first half of 2024. Their efforts included facilitating ID card issuance to improve access to services, empowering women through life-skills training and income-generating activities, and implementing community-based projects to promote social cohesion between displaced and host communities. Cash assistance was provided to address urgent needs and protection risks, while extensive family assessments identified vulnerable households requiring support. Legal consultations were offered to individuals facing challenges such as displacement, evictions, and family issues, and psychosocial support was extended to those struggling with the psychological impacts of crises and economic hardship. Community-based networks raised awareness on key topics and referred cases for tailored assistance. The hub also strengthened its referral systems through training and process enhancements, ensuring timely and comprehensive aid to those in need. These efforts collectively contributed to protecting and empowering vulnerable populations while fostering resilience and inclusion.

Hudaydah Hub

Hudaydah and Hajjah in Yemen face severe challenges due to ongoing conflict, socioeconomic instability, and limited access to essential services. Protection risks are acute, with threats such as landmines, evictions, and psychological distress, particularly affecting women and girls. Humanitarian partners have implemented interventions, including cash assistance to prevent evictions, support for obtaining critical identity documents, and mental health services, though significant gaps persist.

Efforts have focused on assessing needs, providing psychosocial support, and improving coordination among protection actors. However, challenges such as funding shortages, limited service delivery, and economic instability hinder progress. Moving forward, enhanced coordination, increased funding, and a stronger presence of protection actors are essential to address the needs of vulnerable populations in these conflict-affected areas.

Saada Hub

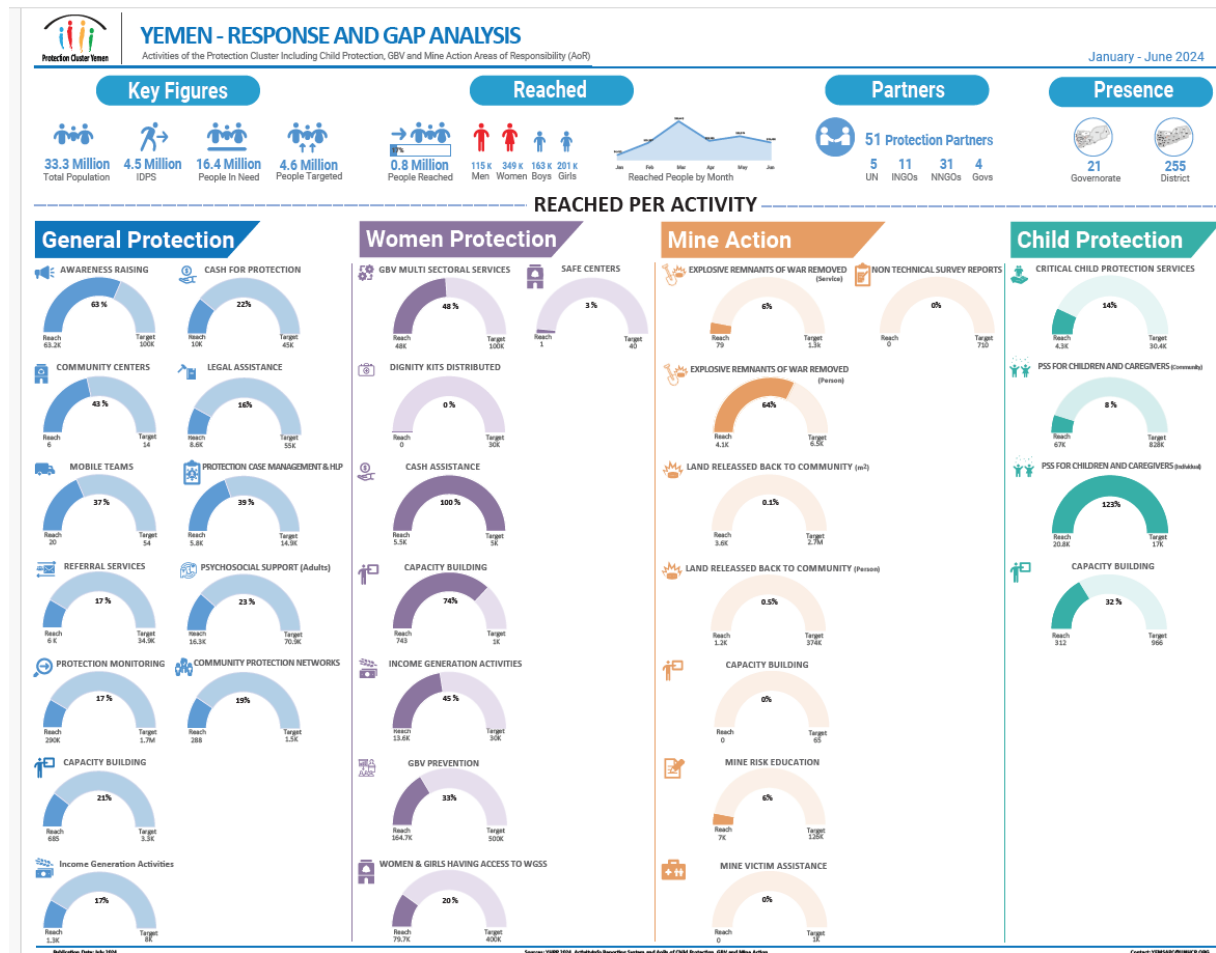

The initiatives in Sa'ada and Al-Jawf Governorates showcase significant efforts to improve protection services and community resilience in Yemen. Partners have enhanced access to legal aid, psychosocial support, and child protection, while systematic protection monitoring ensures timely responses to emerging needs. Collaboration between organizations and protection clusters has increased the efficiency and effectiveness of interventions. In Sa'ada, YDF has implemented Quick Impact Projects (QIPs) such as flood mitigation, life skills training for women, and beekeeping, alongside social activities. OXFAM has distributed cash assistance, launched protection activities, and provided vocational sewing training for women. The Al-Zahra Foundation is addressing gender-based violence (GBV) cases in partnership with UNFPA. In Al-Jawf, YARD is improving infrastructure with projects like road paving, flood barriers, and water management, while also addressing protection needs in collaboration with UNHCR and YHF. Mozn Foundation, with support from UNFPA, is working on GBV initiatives in several districts.

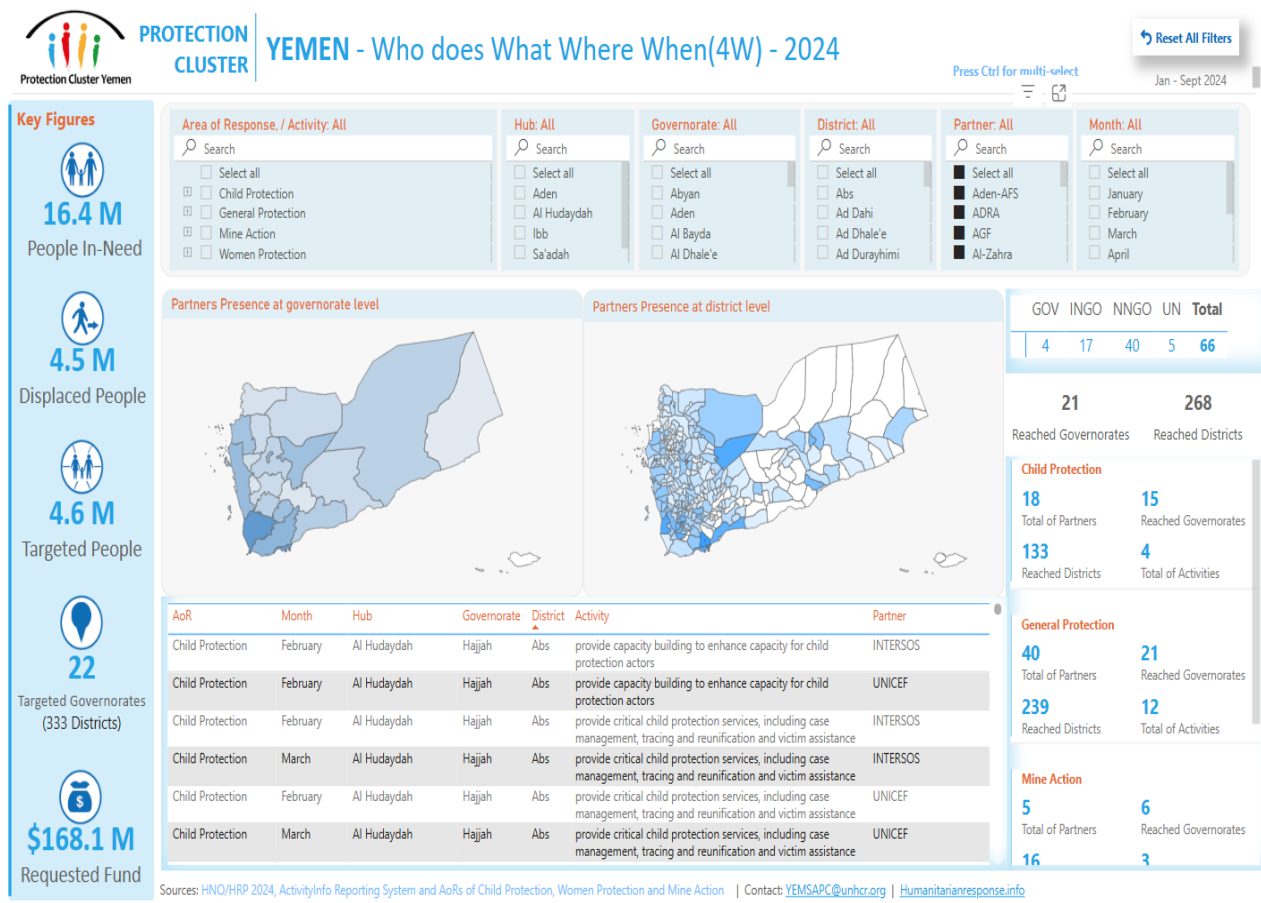

Despite these achievements, the demand for protection services remains high, requiring increased funding, broader coverage, and sustainable interventions.
